# 2017-2024 Alfa Romeo Giulia - Cabin Air Filter

**2017-2024 Alfa Romeo Giulia | Easy | 15-25 minutes | $20 DIY**

**TOOLS**
Trim tool or flat screwdriver (optional) Flashlight Gloves Vacuum or rag for debris

**PARTS**
Cabin air filter 68320112AA $20.00

## STEPS

1. **Prepare the Giulia and confirm the filter application - Park the Giulia level, brake set,** ignition fully off. Catalogs list its cabin filter UNDER the glovebox in the passenger footwell. Confirm the replacement is cataloged for 2017-2024 Giulia (Alfa OE 68320112AA for the 2.0L, or equivalent).
2. **Open the glovebox and release it for access - Empty the glovebox. To reach the filter,** the glovebox is released - remove the screws from its upper inside, then lower it out of the way. Support it as it comes free rather than letting it hang by any wiring.
3. **Locate the slide-in filter housing - With the glovebox lowered, look at the HVAC housing** in the footwell above where it sat. The Giulia uses a slide-in filter - the old one pulls straight out horizontally. Note the airflow arrow direction on the old frame before discarding...
4. **Slide in the new cabin filter - Slide the new filter straight in with its airflow arrow** matching the original orientation. Push it fully home so it lies flat - a half-seated filter whistles at high fan speeds and lets unfiltered air past its edges.
5. **Reassemble and verify HVAC airflow - Lift the glovebox into position and refit its upper** screws - snug, not overtightened into the plastic. Close the glovebox and confirm it latches. Start the Giulia on fresh air and run the fan through its speeds: strong, quiet airflow.
