2019-2024 Audi A6 - Cabin Air Filter Replacement

2019-2024 Audi A6 | Easy | 15-25 minutes | $20 DIY

TOOLS

Trim tool or flat screwdriver (optional) Flashlight Gloves Vacuum or rag for debris

PARTS

Cabin air filter $20.00

STEPS

1. **Park and prep the passenger side - Park the A6 level, ignition fully off. Slide the seat** fully rearward and grab a flashlight - the housing sits up in the dark behind the trim.
2. **Remove the under-glovebox panel - Remove the trim panel under the glove compartment to** expose the filter housing. Check your owner's manual for the exact fastener type rather than forcing anything, and set the panel and fasteners aside where they won't get lost.
3. **Pull the locking tab - Pull the locking tab straight out with firm, steady pressure -** don't twist; twisting is how the tab snaps off. A photo of the old filter in place is cheap insurance against installing the new one backwards.
4. **Install the new filter flat and square - Slide the old filter out and compare it with the** new one. Push it fully home so the cover closes without pressing on it. Audi's interval is typically every two years; black with soot justifies yearly changes.
5. **Reassemble and verify clean airflow - Refit the housing cover until it locks, then** reinstall the trim panel flush with no edges protruding. Start the A6 on fresh air through all fan speeds: strong, clean airflow, no musty odor, no rattling.
