2018-2024 Alfa Romeo Stelvio - Replace Cabin Air

2018-2024 Alfa Romeo Stelvio | Easy | 30 minutes | $25 DIY

TOOLS

Flathead Screwdriver Phillips Head Screwdriver Torx T25 Driver Socket Wrench Extension Bar Ratchet Trim Removal Tool Gloves Safety Glasses Flashlight

PARTS

Cabin Air Filter 53.391.00 $25.00

STEPS

1. **Prepare the passenger footwell - The 2018-2024 Stelvio cabin filter is UNDER the** passenger-side dash - NOT behind the glovebox. You'll need: new cabin filter, Torx T25 wrench, long flathead screwdriver. Sit in the front passenger seat and remove the floor mat.
2. **Remove the under-dash panel - Look under the passenger-side dash. Remove the lower** under-dash panel, secured by THREE Torx T25 screws. Remove all three with your T25 wrench and set the panel aside. You'll also need to unclip the final section of the center tunnel cover.
3. **Access the filter cover - With the under-dash panel removed, you'll see the HVAC housing.** Unclip the push pins on the polystyrene air duct and move it aside. Shift the rubber tube covering the filter cover to expose it. The filter is deep in the footwell - use a...
4. **Remove the old filter - Open the filter cover (shift the rubber tube covering it). Pull** the old filter out - use the long flathead screwdriver to help guide it out; the space is tight. Note the airflow direction. Take your time in this awkward position.
5. **Install the new filter - Insert the new filter into its seat, using the long flathead** screwdriver to guide it - the angle is tricky. Ensure it's fully seated and oriented correctly. Close the filter cover and shift the rubber tube back over it.
6. **Reassemble and test - Reinstall the under-dash panel with the three Torx T25 screws.** Reclip the center tunnel cover section. Replace the floor mat. Test the HVAC - the climate control should have clean airflow. Replace every 15,000-20,000 miles.
