2015-2020 Cadillac Escalade - Cabin Air Filter

2015-2020 Cadillac Escalade | Easy | 15-25 minutes | $20 DIY

TOOLS
Flashlight Gloves Vacuum or rag for debris

PARTS
Cabin air filter $20.00

STEPS

1. **Prepare the Escalade - the filter is under the dash, not behind the glovebox door - Park** on level ground, brake set, ignition off. On the K2XX the filter is NOT behind the glovebox - it's under the dash, driver's side. No tools needed. Confirm fitment for 2015-2020 - Tahoe/Yukon boxes list the same filter.
2. **Remove the hush panel under the passenger dash - Sit in the passenger seat of the** 2015-2020 Cadillac Escalade and look up under the dashboard. Locate the hush panel - the large plastic insulator panel covering the underside of the dash. Release its clips or fasteners and lower the pane...
3. **Unclip the filter access door - Unclip the rectangular filter access door from the front** of the HVAC housing and pivot it aside to expose the opening. Do not force the door past its pivot - the plastic tabs are brittle on older Escalades. Replace the cabin filter rough...
4. **Slide the new filter in and snap the cover on - Slide the new filter in, arrow matching** the original orientation. Seat it fully flat - a half-inserted filter whistles at high fan speeds. Snap the cover back on until both tabs click.
5. **Reassemble and verify HVAC operation - Start the engine and run the HVAC on fresh air** through all speeds - strong, clean airflow, no rattles. Interval: every 20,000 to 30,000 miles, sooner under trees. Check the rear vents - weak rear airflow flags a seating problem.
