2022-2023 Chevrolet Bolt EUV - Cabin Air Filter

2022-2023 Chevrolet Bolt EUV | Easy | 10-15 minutes | $28 DIY

TOOLS
Flat-blade screwdriver (only if the filter door uses a screw) Flashlight Small vacuum for the filter slot and cowl grille

PARTS
Cabin air filter for 2022-2023 Chevrolet Bolt EUV; verify arrows, size, and VIN/trim fitment $28.00

STEPS

1. **Empty the glove box and get into the footwell - Empty the glove box completely; a stray** pen can jam the swing-down mechanism. Kneel in the passenger footwell with a flashlight to see the side stops.
2. **Squeeze the glove box past its side stops - Open the glove box and squeeze both side** walls inward so the stop tabs flex past the dash opening. Unhook the right-side damper arm from its pin.
3. **Open the rectangular filter door - Release the clips or small screw holding the** rectangular filter door and pull it toward you. Note the old filter's airflow-arrow direction before you touch it.
4. **Slide the old filter out and check the cowl intake - Slide the old filter out and vacuum** the housing clean. Clear any leaves matted in the cowl intake grille at the windshield base.
5. **Install the new filter with the arrow down - Slide the new filter in with the airflow** arrow pointing down toward the blower. Push it fully home so the frame sits flush in the housing rails.
6. **Close the door and swing the glove box home - Press the filter door back on until its** clips or screw seat fully. Lift the glove box past the side stops until it clicks, then rehook the damper arm.
7. **Power on and test every fan speed - Power the car on and run the climate fan from low to** max, with recirculation on and off. Airflow should be strong from all vents with no whistle or rattle.
