2014-2017 Chevrolet SS - Cabin Air Filter

2014-2017 Chevrolet SS | Easy | 10-15 minutes | $28 DIY

TOOLS
Flashlight (optional) Dust mask (optional)

PARTS
Cabin air filter for 2014-2017 Chevrolet SS; verify arrows, size, and VIN/trim fitment $28.00

STEPS

1. **Find the filter behind the glove box - The SS keeps its cabin filter directly behind the** glove box on the passenger side, in a rectangular HVAC housing with a clip-on access door. Park level, ignition off, and empty the glove box so it can be lowered.
2. **Empty the glove box and unhook the damper arm - Open and fully empty the glove box. On** the right side, unhook the damper arm from its post so the box can swing lower. The box stays on its hinges - you only need it lowered, not removed.
3. **Squeeze the box past its stoppers - Press both sides of the glove box inward to release** the stoppers, then rotate the box down onto its hinges. If a stopper resists, squeeze closer to the rear rather than forcing the front edge - those small tabs snap.
4. **Unclip the access door and remove the old filter - Release the cover's clips and pull it** toward you. Slide the old filter out horizontally, keeping it level so trapped dust doesn't spill into the blower. On the SS the arrow points down - a phone photo takes two seconds.
5. **Seat the new filter with the arrow pointing down - Slide the new cartridge in with the** arrow pointing down, seating it evenly with no gaps at the sides - unfiltered air will take any gap you leave. Snap the access door back on and confirm every clip is seated.
6. **Raise the glove box and reconnect the damper - Lift the glove box, pressing both sides** inward so the stoppers snap past the dash opening. Hook the damper arm back onto its post. Open and close the box - it should lower with the normal damped motion.
7. **Verify the HVAC and set your schedule - Start the car and run the fan on high - strong,** even airflow, no whistling behind the glove box. A whistle means the door isn't latched. Replace the filter yearly or every 15,000 to 20,000 miles; sooner on dusty roads.
