2007-2014 Honda Fit - Cabin Air Filter Replacement

2007-2014 Honda Fit | Easy | 10-15 minutes | $28 DIY

PARTS

Cabin air filter for 2007-2014 Honda Fit; verify arrows, size, and VIN/trim fitment
$28.00

STEPS

1. **Open and empty the glove box - Turn the car off and open the glove box on the passenger** side. Empty it completely - the box swings down on its bottom hinge, and anything inside will fall behind the dash. No tools needed.
2. **Release the glove box claws - Push both sides of the glove box inward to release the** claws (the stoppers on the box walls), then let the box swing down. If your Fit has a damper arm on the right, unhook it from its post first.
3. **Open the filter tray or cover - 2007-2008: press the left and right tabs on the plastic** cover and pull the whole filter tray straight out - the filter rides inside it. 2009-2013 GE: unlatch both tabs, pull the cover off, then pull the filter out.
4. **Remove the old filter - Lift the old filter out of the tray (or housing on later cars)** and note the airflow arrow on its frame. On a Fit this small, a clogged filter noticeably weakens the fan.
5. **Install the new filter - Lay the new filter into the tray (2007-2008) or slide it into** the housing (2009-2013), airflow arrow pointing the same way the old one faced. It should sit flat - fully nested in the tray with no curled edges.
6. **Reinstall everything - Slide the tray back until its tabs click (2007-2008), or press the** filter cover on until both latches engage (2009-2013). Raise the glove box, push both sides in so the claws re-engage, and rehook the damper arm if your car has one.
7. **Test the airflow - Close the glove box and start the car. Run the fan from low to high** and check airflow at the vents - strong and steady. Buzzing behind the dash usually means a cover tab didn't fully latch.
