2019-2022 Kia Niro EV - Cabin Air Filter

2019-2022 Kia Niro EV | Easy | 10-15 minutes | $15 DIY

TOOLS
None required (clips release by hand)

PARTS
1x cabin air filter (2019-2022 Kia Niro EV fitment) $15.00

STEPS

1. **Power off and open the glove box - Park the Niro EV, power it fully off, and open the** passenger glove box. Empty it completely so nothing falls behind it during the job. This is a 12-volt accessory job that never touches the high-voltage system.
2. **Release the glove box damper - Unhook the small damper arm on the right side of the glove** box by sliding its loop off the pin, and let it hang free so it doesn't snap back. The glove box should now swing down farther than normal.
3. **Drop the glove box down - Squeeze both sides of the glove box inward to clear the stop** tabs, then lower it fully toward the floor. The rectangular cabin filter cover should now be visible behind it.
4. **Open the filter cover and remove the old filter - Release the clips or tabs on the cabin** filter cover and pull it off. Slide the old filter out, noting its airflow arrow direction. Compare old and new filters to confirm the size matches.
5. **Install the new filter - Slide the new cabin filter into the housing with its airflow** arrow pointing DOWN, matching the old filter's orientation. Push it fully home so it sits flat with no gaps. Refit the cover until its clips snap shut.
6. **Reassemble and test the HVAC - Lift the glove box up, snap its side tabs past the stops,** rehook the damper arm onto its pin. Close the box and run the fan on high. Done when airflow feels strong and clean with the box closing normally.
