2019-2024 Chevrolet Blazer - Cabin Air Filter

2019-2024 Chevrolet Blazer | Easy | 5-10 minutes | $28 DIY

TOOLS
shop vacuum or damp cloth flashlight

PARTS
Cabin air filter for 2019-2024 Chevrolet Blazer; verify arrows, size, and VIN/trim fitment $28.00

STEPS

1. **Confirm fitment and locate the filter - The Chevrolet Blazer returned as a midsize** crossover for 2019, and every 2019-2024 Blazer - whether the 2.5L four-cylinder, the 2.0L turbo, or the 3.6L V6 - keeps its cabin air filter behind the glove box.
2. **Prep and switch the ignition off - Turn the ignition off and take the key or fob with you** so the blower cannot switch on during the job. A flashlight aimed behind the dash will help you spot the tray clips once the box is down.
3. **Detach the damper arm and lower the glove box - Open the glove box and look at its right** outer edge for the damper arm. Unclip the arm from the side of the box so the box can swing freely.
4. **Lift the old filter from the tray and note the arrow - Lift the old filter out of the** tray and look at the airflow arrow printed on its frame - note which way it points (downward, toward the floor, on most Blazers) so the new one goes in the same way.
5. **Clean the tray and housing - Wipe or vacuum the tray and the inside of the housing to** remove dust and leaf bits that accumulated around the old filter. Keep debris out of the empty housing opening. Set the new filter into the tray.
6. **Reinstall the tray and the glove box - Slide the tray back into the housing and push** until its side tabs click and lock into place - give it a gentle tug to confirm it is latched. Open and close the box to verify it moves smoothly and latches shut.
7. **Test the HVAC and plan the next change - Start the car and run the fan from low to high** on fresh-air mode, checking the passenger vents for strong, steady airflow and listening for whistles that would mean the tray is not fully latched.
