2020-2024 Land Rover Defender - Replace Cabin Air

2020-2024 Land Rover Defender | Easy | 15-20 minutes | $38 DIY

TOOLS
Flashlight Clean cloth Small screwdriver (only if your housing cover uses screws)

PARTS
Cabin Air Filter, activated carbon (also listed as LR133345 / LR133511) LR133345 $37.95

STEPS

1. **Park level and get to the passenger side - On the 2020-2024 Defender - including the** short-wheelbase 90 First Edition - the pollen filter lives behind the glove compartment on the passenger side, in the HVAC housing.
2. **Empty the glove box completely - Open the glove box and take everything out. You'll be** lowering the box to reach the filter housing behind it, and anything left inside will tumble into the footwell or wedge behind the trim.
3. **Release the stops and lower the glove box - Press inward on both sides of the glove box** to clear its stop tabs from the dashboard frame, and let the box swing down on its lower hinge.
4. **Remove the filter housing cover - Work it out gently; the cover is plastic and the tabs** can be brittle. Set it aside somewhere it won't get kicked. Shine a light into the slot and note which way the old filter's arrow points.
5. **Pull the old filter and compare elements - Slide the old filter out of the housing. Land** Rover fits a carbon-impregnated element here - the grey media is what absorbs odors - and there's also a higher-grade PM 2.5 version for the L663 platform, so compare your old filter with t...
6. **Seat the new filter with matching orientation - Slide the new filter into the housing in** the same orientation as the old one, keeping it flat and centered so the edges don't fold.
7. **Rehang the glove box and verify the climate - Swing the glove box back up, pressing the** sides in so the stop tabs catch in the frame, and reconnect the damper if you detached one. Close the box and check it opens and shuts normally.
