2019-2024 Lexus UX - Brake Pad Replacement

2019-2024 Lexus UX | Advanced | 1-3 hours | $205 DIY

TOOLS

Floor jack, rated jack stands, and wheel chocks Lug wrench and calibrated torque wrench Brake piston compressor or suitable spreader Socket set, wire brush, brake cleaner, gloves, and eye protection

PARTS

Front or rear brake pad set for 2019-2024 Lexus UX; verify axle, brake package, and VIN fitment $180.00

Replacement pad hardware or wear sensor only if the kit requires it $25.00

STEPS

1. **Confirm the front brake setup - The UX200/UX250h use single-piston floating front** calipers with OE ceramic pads and shims (Advics). Order front-axle pads; hybrid regenerative braking stretches pad life, so inspect thickness through the caliper instead of assuming. Check...
2. **Lift and secure the UX - Park on level ground, chock the rear wheels, and set the parking** brake. Break the front lug nuts loose on the ground, raise the front on jack stands, and remove the wheel. Turn the steering so the slide-pin bolts swing into reach.
3. **Remove the caliper and old pads - Remove the two slide-pin bolts; removing the lower bolt** lets you swing the caliper on the upper pin. Hang the caliper from the strut - never by the brake hose. Slide the old pads out, note the shim arrangement, and check the boots for te...
4. **Prep the hardware and retract the piston - Wire-brush slide points and fit the new plates** and shims - grease the pad ears only, never friction faces. Re-grease slide pins with silicone grease. Siphon the reservoir if near MAX (retracting raises the level), then C-clamp the piston...
5. **Install pads, torque, and pump - Seat the new pads and shims, swing the caliper down, and** torque the slide-pin bolts and lugs to spec (owner's manual), lugs in a star pattern. Pump the pedal until firm before driving. Top up the reservoir with the correct DOT fluid if low.
