2017-2024 Mitsubishi Mirage G4 - Cabin Air Filter

2017-2024 Mitsubishi Mirage G4 | Easy | 15-30 minutes | $22 DIY

TOOLS

No tools required - the glove box releases by hand Flashlight (optional, the filter housing area is dark) Damp cloth or vacuum (optional, for cleaning the housing)

PARTS

Cabin air filter for Mitsubishi Mirage G4 (2017-2024) $22.00

STEPS

1. **Park and prepare the passenger area - Park the Mirage G4, set the parking brake, and turn** the ignition fully off so the blower motor cannot run while your hands are in the housing. Open the passenger-side glove box and remove everything inside, because the glove box must swing...
2. **Release the glove box - Squeeze the sides of the glove box inward so its stop tabs clear** the dashboard opening, then lower it down on its hinges until it hangs open.
3. **Open the cabin filter housing - Locate the rectangular plastic filter door directly** behind the lowered glove box on the Mirage G4's HVAC housing. Set the cover somewhere clean so grit on it does not fall into the blower when you reinstall it.
4. **Note the airflow direction and remove the old filter - Before pulling the old filter,** look for the airflow arrow printed on its frame and note which way it points in the housing, because the new filter must go in the same orientation. Slide the dirty filter straight out and inspect it; a gray,...
5. **Clean out the housing - Wipe or vacuum the empty filter slot clean - debris left behind** will blow onto the evaporator or into the cabin on the first blower run. A clean slot lets the new filter seat flat against its rails.
6. **Install the new cabin filter - Slide the new cabin filter into the housing with its** airflow arrow pointing in the same direction the old filter's arrow pointed. The filter should sit fully flat and square in the slot with no gaps around its frame.
7. **Reinstall the housing cover - Press the filter door back onto the housing until its latch** tabs click firmly into place on both sides. A cover that will not latch usually means the filter is not pushed in all the way.
8. **Reinstall the glove box and test - Lift the glove box back up, squeeze its sides so the** stop tabs clear the dashboard, and reattach the damper arm if your G4 has one. Open and close the glove box a few times to confirm it latches smoothly and hangs level. Turn the ignition...
