2019-2024 Ram 2500 - Cabin Air Filter Replacement

2019-2024 Ram 2500 | Easy | 15-20 minutes | $26 DIY

TOOLS
None required (may need a small flat screwdriver for clips) Vacuum or compressed air Flashlight

PARTS
Cabin air filter (2019-2024 Ram 2500/3500) $26.00

STEPS

1. **Park and prep the passenger side - Switch the engine fully off, open the passenger door,** and slide the seat back. The filter sits behind the glovebox - empty it so nothing drops behind the door when it swings down. Keep the new filter handy for comparison.
2. **Drop the glovebox door by the console side - Pop the tabs by pulling outward on each side** - they release horizontally, not upward - then lower the door with control. Don't detach the right-side travel cable; yank the door and it can snap or retract into the dash.
3. **Pop the two tabs on the filter cover - Pop the two tabs on the rectangular access cover** and set it aside. Photograph the old filter's airflow arrow before touching it - a photo now prevents the classic upside-down install.
4. **Remove the old filter and clean the housing - Slide the old filter straight out and** vacuum loose debris from the housing - leftover grit embeds in the fresh element. A filter packed with dust was overdue; trucks on dirt roads need this checked well before the book interval.
5. **Install the new filter - Slide the new filter in with its arrows matching the old** filter's direction, flat and fully seated. Snap the cover back until both tabs click. Listed replacements include Mopar 68406048A and FRAM CF11671 - confirm fitment in your owner's...
6. **Reassemble and test all blower speeds - Swing the glovebox door up until both tabs click,** close it, and confirm the latch. Run the fan on all speeds - airflow should be strong and clean. Door won't latch? A tab isn't seated; drop it and refit.
