STEPS

1. **Confirm the 2.0L hybrid specs and set up safely - Park the 2023-2024 Toyota Prius Prime** on level ground, set the parking brake, and chock the rear wheels. The 2.0L M20A-FXS takes 4.4 quarts of 0W-16 with a filter change - 0W-20 is only a temporary substitute, so buy 0W-16. Gather a spin...
2. **Warm briefly and remove the fill cap - Warm just enough for the oil to flow, then switch** off - on a hybrid the engine cycling on and off is normal. Remove the fill cap to vent the crankcase.
3. **Drain the oil and swap the spin-on filter - Position the drain pan, loosen the drain** plug, and remove it by hand, letting the oil drain fully. While it drains, spin off the old filter. Verify the old gasket came off with it, wipe the mounting surface, then lightly oil the new filter...
4. **Refill with 4.4 quarts of 0W-16 - Pour 4.4 quarts of 0W-16 through a funnel - do not** overfill; the M20A-FXS is sensitive to excess oil. Refit the fill cap and dipstick, both fully seated. Confirm the under-cover screws are back in and the drain plug area is dry.
5. **Leak-check, verify the level, and reset the reminder - For the leak check, put the car in** Inspection (Maintenance) Mode so the engine stays running, then look underneath at the drain plug and filter. Reset the oil reminder through the steering-wheel controls and log the mileage and date.
