2014-2021 Toyota Tundra - Engine Air Filter

2014-2021 Toyota Tundra | Easy | 5-10 minutes | $35 DIY

TOOLS
Clean rag or shop vacuum Gloves (optional)

PARTS
Engine air filter for 2014-2021 Toyota Tundra; verify engine, housing shape, and VIN fitment $35.00

STEPS

1. **Locate the airbox - On the 5.7L V8 (3UR-FE, unchanged across 2014-2021), the airbox is** the large black box on the passenger side of the engine bay, just ahead of the firewall-side fuse area, with the intake snorkel running to the front.
2. **Pop the four spring clips - Find the four metal spring clips spaced around the airbox lid** - two along the front edge and one on each side. Don’t lose your grip on a stiff one; they can snap back against the plastic with surprising force.
3. **Lift the lid and pull the old filter - Lift the lid straight up and set it aside - no** intake tube needs to be disconnected on this truck, the tube stays attached to the lid and flexes enough. Pull the old panel filter out of the lower box.
4. **Clean the housing - Vacuum or wipe the dust, dead bugs, and road grit out of the lower** box, especially along the ledge where the filter’s sealing edge rests. Peek down the intake snorkel for trapped leaves - Tundras that park under trees pack debris into th...
5. **Seat the new filter - Set the new panel filter into the lower box so it sits fully down** on its ledge with the rubber sealing edge flat all the way around. It should seat with light hand pressure and look level from every angle.
6. **Close the lid and latch every clip - Lower the lid back onto the box, making sure it sits** evenly on all four edges, then snap all four spring clips back over their posts one by one.
7. **Start up and verify - Close the hood and start the truck. Let it idle and listen for any** whistling that would indicate a clip left unlatched, and confirm the idle is steady with no warning lights. If a check-engine light appears, recheck the lid seal first.
