2001-2006 Chrysler Sebring - Wiper Blade

2001-2006 Chrysler Sebring | Easy | 10-20 minutes | $66 DIY

TOOLS

Clean shop towel or microfiber cloth (to pad the windshield) Glass cleaner for post-install cleanup Penetrating oil (optional, if an old adapter is corroded onto the hook)

PARTS

Driver wiper blade, 22" Bosch 22A $32.99
Passenger wiper blade, 22" Bosch 22B $32.99

STEPS

1. **Confirm the correct blade sizes - sedan/convertible vs coupe - This guide covers the** sedan and convertible; if you have the coupe, buy 24 and 21 inches instead. There is no rear wiper on any Sebring of this generation.
2. **Note the 9x3 J-hook attachment - This is the simplest and most common wiper attachment** ever made: the blade's adapter threads through the hook's curve and a locking tab snaps shut.
3. **Lift the arms - no service position needed - With the ignition off, lift the driver-side** arm away from the glass until the hinge holds it upright. Lift only one arm at a time so the other side stays down as a visual reference.
4. **Slide the old blade out of the hook - If the old blade has been on the car for years, the** adapter may be seized to the hook with corrosion; a gentle wiggle side to side frees it, but never yank straight down on the arm itself.
5. **Fit the new 22-inch blades and latch them - Give the blade a firm tug toward the tip of** the arm to confirm it is locked - on a Sebring, a blade that is threaded but not latched will slide right back out the first time the wipers run.
6. **Check blade symmetry before lowering the arms - Because both front blades are 22 inches** and the adapters are identical, it is easy to install a blade slightly off-center in the hook - it will look fine but wipe crooked.
7. **Confirm blade clearance, top up fluid, and wipe the cowl - Also confirm the two blades do** not collide at the center of the windshield; if they touch, one adapter is seated off-center. Top up the washer fluid if needed, and give the cowl area a quick wipe so leaves do not clog the washer nozzles.
