2005-2008 Dodge Magnum - Engine Air Filter

2005-2008 Dodge Magnum | Easy | 15-20 minutes | $35 DIY

TOOLS
Flathead screwdriver or 8mm nut driver (intake tube clamp) Clean rag or shop vacuum Work gloves (optional)

PARTS
Engine air filter for 2005-2008 Dodge Magnum; verify engine, housing shape, and VIN fitment $35.00

STEPS

1. **Park up and find the airbox - Park on level ground, switch the engine off, and let it** cool. Pop the hood and look for the big black plastic airbox in the front passenger-side corner of the engine bay, right behind the headlight.
2. **Lift off the engine cover (5.7L) - It just lifts off - pull it straight up off its rubber** grommets and set it aside on a clean fender or the ground. Now you can see the full run of the intake tube from the airbox to the throttle body.
3. **Pop the two lockdown tabs - The back edge of the lid sits in locating tabs, so do not try** to lift it straight off - it hinges upward from the rear like a trunk lid.
4. **Free the intake tube - Loosen the worm-gear clamp where the intake tube meets the** throttle body using a flathead screwdriver or an 8mm nut driver - this gives the tube enough slack to move.
5. **Pull the old filter and clean the box - Hinge the lid up and lift the old panel filter** straight out of the lower box half. Vacuum or wipe out any leaves, sand, and grit from the bottom of the box, but do not push debris toward the intake opening at the back.
6. **Seat the new filter - Drop the new panel filter into the lower box in the same** orientation as the old one, rubber gasket facing down and sitting flat and even all the way around.
7. **Close it up and check for leaks - Push the breather hose back onto its nipple (5.7L),** retighten the intake tube clamp, and press the engine cover back onto its grommets. Start the engine and listen for any hissing around the airbox that would betray an air leak.
