2021-2024 Ford Bronco - Cabin Air Filter

2021-2024 Ford Bronco | Easy | 15-25 minutes | $20 DIY

TOOLS
Trim tool or flat screwdriver (optional)
Flashlight Gloves Vacuum or rag for debris

PARTS
Cabin air filter $20.00

STEPS

1. **Prep and empty the glovebox - Park the Bronco, set the parking brake, and empty the** glovebox. The full-size Bronco's cabin filter is a single panel element behind the glovebox on the passenger side - quick to reach once the box drops.
2. **Expose the filter door - Squeeze the glovebox walls inward past the stop tabs and let it** swing down, supporting it as it drops. Unhook the damper cord on the right side by sliding it off its pin first.
3. **Remove the old filter and clean - Unclip the filter cover and pull it off. Slide the old** filter out, noting its airflow arrow, and bag it. Vacuum the slot - off-road dust is why Bronco filters load early, so get the housing clean before the new one goes in.
4. **Install the new filter - Slide the new filter in with its airflow arrow matching the old** one, pressed fully home and flat with no gaps - don't bend the frame. Refit the filter cover until its clips engage firmly.
5. **Reassemble and verify airflow - Lift the glovebox past its stop tabs, reconnect the** damper cord, and close it. Start on fresh air - confirm strong airflow with no rattles or musty smell, and no whistling on high fan, which means the cover isn't clipped shut.
