2013-2019 Ford Escape S - Replace Cabin Air Filter

2013-2019 Ford Escape | Easy | 30 minutes | $20 DIY

TOOLS

Gloves T20 Driver Wheel Chocks T20 Socket Safety Glasses

PARTS

Cabin Air Filter CF11920 $20.00

STEPS

1. **Open glovebox and lower it - The 2013-2019 Escape cabin filter sits low in the HVAC** housing, accessed underneath/behind the glovebox on the passenger side. You'll need: a new cabin filter. Open the glovebox, empty it, and lower it - pressing the sides in and disco...
2. **Locate the access panel - Look underneath/behind the glovebox for the rectangular access** panel on the HVAC housing. The exact fastener (possibly a Torx screw) varies - check your specific panel.
3. **Remove the access panel - Remove the access panel - if there's a screw, remove it and** slide the panel off. Set it aside; the filter is now visible. Don't confuse this with Explorer procedures - the Escape is different.
4. **Remove the old filter - Pull the old filter straight out and note the airflow direction.** A dirty or clogged filter is why the HVAC is weak. Ensure the new one matches.
5. **Install the new filter - Slide the new filter in, matching the airflow direction, and** seat it fully. Reinstall the access panel - slide it back on and secure the screw if applicable. The panel should sit flush.
6. **Reassemble and test - Raise the glovebox back up (reconnecting the damper cord if** disconnected) and close it. Test the HVAC - airflow should be strong. Replace every 15,000 miles.
