2018-2024 GMC Terrain - Wiper Blade Replacement

2018-2024 GMC Terrain | Easy | 15-20 minutes | $81 DIY

TOOLS

One 24-inch and one 18-inch front blade (J-hook fitment) One 12-inch rear blade
A tape measure and a clean microfiber towel
Washer fluid to top off the reservoir

PARTS

Driver wiper blade, 24" Bosch 24A $32.99
Passenger wiper blade, 18" Bosch 18B $32.99
Rear wiper blade, 12" $14.99

STEPS

1. **Confirm the sizes and connector for your model year - For the redesigned 2018-2024** Terrain, every major fitment source (autopadre, wipersized, windshield wipers year-by-year chart) agrees: 24 inches on the driver side, 18 inches on the passenger side, and a 12-inch rear blade. This is a cle...
2. **Park, power off, and lift the arms - The Terrain needs no wiper service position - its** arms park on the cowl where you can reach them at rest. Lift the driver-side arm away from the windshield until it stays up on its hinge.
3. **Remove the old driver-side blade - Press or lift that tab (it varies slightly by blade** brand) and slide the blade downward, out of the hook's curve, keeping the motion parallel to the arm. The blade should come free with modest effort.
4. **Prep the new 24-inch blade - Open the 24-inch blade, strip off the plastic blade guard,** and confirm the connector is a plain open saddle sized for a J-hook arm - no extra adapters should be needed, and any bag of "universal" adapters that came in the box can sta...
5. **Install the driver-side blade and check the lock - Pull downward on the blade to confirm** it is locked - a correctly seated blade will not budge. A blade that sits crooked usually means the saddle is not fully home on the hook - lift and re-seat it rather than forcing the arm down. Stan...
6. **Passenger side and the rear blade - Now the rear: lift the short rear wiper arm off the** tailgate glass - it does not lift far, so support it. Match the new 12-inch rear blade to whatever you removed. Be gentle with the rear arm - it is short, stiff, and mounted near the...
7. **Test all three with washer fluid - Ignition to accessory, spray the front washers, and** run several wiper cycles. Both front blades should sweep smoothly with no chatter, and the arcs should meet near the center of the glass without overlapping or clashing.
