2021-2024 GMC Yukon - Wiper Blade Replacement

2021-2024 GMC Yukon | Easy | 10-15 minutes | $81 DIY

TOOLS

One 12-inch rear blade with snap-claw mount (2021+ fitment) Tape measure, to confirm the rear blade against stale 13-inch listings Glass cleaner, a rag, and a step stool for the tall windshield

PARTS

Driver wiper blade, 22" Bosch 22A $32.99
Passenger wiper blade, 22" Bosch 22B $32.99
Rear wiper blade, 12" $14.99

STEPS

1. **Confirm your sizes and buy the right blades - This is the 2021-2024 Yukon, the T1XX** generation that arrived with the full redesign - independent rear suspension, new body, new wiper sizing. It takes 22-inch blades on both the driver and passenger sides, which is unusual; most big...
2. **Park the wipers and set up - Wipers off, shut the Yukon down so the arms rest at the base** of the windshield - no service position; the arms lift straight up by hand. If the blades are frozen to the glass, run the defroster until they release.
3. **Remove the old driver-side blade - Lift the driver-side arm away from the windshield** until it stands on its own. Both blades are the same 22 inches, so just do one side at a time. Keep a hand on the arm once the blade is off - the springs are strong and a bare arm snappin...
4. **Prep the new blade - Unbox one new 22-inch blade and hold it against the old driver blade** to confirm the match. Confirm the center fitting is the 9x3 J-hook saddle; on multi-adapter blades, fit the J-hook adapter now.
5. **Install the new driver blade and verify the lock - Guide the arm back down slowly,** keeping hold the whole way; never let a bare arm snap onto the glass. Sight along the blade to confirm it lies flat with no arched sections.
6. **Do the passenger side, then the rear blade - Then the back: lift the rear arm off the** liftgate glass. If your old rear blade measures 13 inches, a previous owner fitted the wrong size from a stale chart - put the correct 12 on and the overhang catching the glass edge stops.
7. **Test with washer fluid, front and rear - Spray washer fluid and run the fronts on low and** high. Run the rear washer and wiper and confirm the 12-inch blade clears the liftgate cleanly.
