2018-2024 Honda Odyssey - Tire Pressure & Rotation

2018-2024 Honda Odyssey | Moderate | 45-75 minutes | $10 DIY

TOOLS

Tire-pressure gauge and air compressor or pump Floor jack, rated jack stands, and wheel chocks Lug wrench and calibrated torque wrench

PARTS

Valve-stem caps or replacement TPMS service parts only if inspection requires them
$10.00

STEPS

1. **Check cold pressures against the door-jamb sticker - Check tires before the day's first** drive, completely cold. The Odyssey's indirect TPMS watches wheel-speed differences, so one tire a few PSI off its mates can trigger a warning.
2. **Inspect tread and choose the rotation pattern - Inspect each tire for uneven wear, cuts,** bulges, and embedded debris, and check tread against the 2/32-inch wear bars - minivans are heavy and punish neglected tires. Directional tires (rotation arrow) stay on their own side, front-to-re...
3. **Rotate the tires safely - Park on flat pavement, shift to Park, apply the parking brake,** and chock the wheels staying on the ground. Crack the lug nuts before lifting, then raise on the factory pinch-weld or subframe points and lower onto jack stands - never unde...
4. **Calibrate the indirect TPMS - Parked, go to Home, Settings, Vehicle, TPMS Calibration,** and select Calibrate. It completes after ~30 minutes of cumulative driving between 30 and 60 mph. Don't skip this: without calibration the light illuminates even with perfect pressur...
5. **Road test and recheck - Recheck cold pressures the next morning. Re-torque lug nuts after** 50-100 miles. Check pressures monthly - loads vary a lot - and rotate every 5,000-7,500 miles or when the Maintenance Minder requests it.
