2010-2015 Hyundai Tucson | Moderate | 1 hour | $60 DIY

TOOLS

10mm Socket Flathead Screwdriver Phillips Head Screwdriver Trim Removal Tool Socket Wrench Ratchet Wrench Extension Bar T20 Torx Bit T25 Torx Bit Plastic Pry Tool

PARTS

Left Side Mirror Assembly 9331-1101L $59.95
Right Side Mirror Assembly 9331-1101R $59.95
Mirror Glass 87611-2S010 $37.25

STEPS

1. **Park safely and disconnect power if heated/powered - If the mirror is power-adjustable,** heated, or has a turn-signal repeater or puddle lamp, disconnect the negative battery cable before unplugging anything - shorting a powered mirror harness can damage the body control module.
2. **Remove the interior sail/triangle trim - Carefully pry the sail panel off with a plastic** trim tool, starting at the top edge - it is held by clips that snap if yanked.
3. **Unplug connectors and remove mounting fasteners - On the Hyundai Tucson: unplug the** mirror's electrical connector(s) - press the locking tabs, never pull the wires. Remove the three mounting nuts from inside the door (usually 10mm) while your helper supports the mirror outside.
4. **Clean the mounting surface and check the sheet metal - Clean all old gasket residue from** the door's mounting surface and check the sheet metal around the stud holes for cracks or corrosion - a mirror mounted to cracked sheet metal will never sit tight and will whistle at speed.
5. **Install the new mirror - Start all three nuts by hand to avoid cross-threading, then** tighten them evenly in a rotation - tightening one fully first cocks the mirror and leaves a gap that whistles. Snug is sufficient; overtightening dimples the door skin.
6. **Refit the sail panel and reconnect power - On the Hyundai Tucson: refit the sail panel,** pressing each clip home, and reconnect the tweeter if equipped. Reconnect the battery if you disconnected it.
