2016-2024 Jaguar XE - Replace Cabin Air Filter

2016-2024 Jaguar XE | Easy | 30 minutes | $30 DIY

TOOLS

Flathead Screwdriver Phillips Head Screwdriver Trim Removal Tool T20 Torx Driver Gloves

PARTS

Cabin Air Filter J9C1-19N616-AA $25.00
Glove Box Damper Clip J9C1-19N616-AB $5.00

STEPS

1. **Open glovebox and prepare - Empty the glovebox. The 2016-2024 Jaguar XE cabin filter sits** behind the glovebox. Get a ~193 x 213 x 30 mm filter (Bosch M 2190 or MANN FP 1919 class). If the housing isn’t there, check your owner’s manual.
2. **Access behind the glovebox - Lower or remove the glovebox, releasing the stoppers/damper** as needed. Find the filter housing/cover in the passenger-side HVAC housing. Verify your replacement matches the ~193 x 213 x 30 mm dimensions.
3. **Remove the filter cover - Remove the filter cover (tabs or screws). Set it aside - the** cabin filter is now visible. If the housing isn’t where expected, consult the owner’s manual before forcing anything.
4. **Remove the old filter - Pull the old filter out and note the airflow direction. A dirty,** clogged filter strains the HVAC - replace it so your climate control breathes freely.
5. **Install the new filter - Slide the new filter in, matching the airflow direction to the** housing markings. Make sure it’s fully seated and correctly sized (~193 x 213 x 30 mm), then secure the cover.
6. **Reassemble and test - Reinstall the glovebox in reverse order. Test the climate control** for fresh airflow. Replace the filter every 15,000-20,000 miles; on some years the housing is accessed from the footwell instead.
