2020-2024 Kia Telluride - Brake Pad Replacement

2020-2024 Kia Telluride | Advanced | 1-3 hours | $205 DIY

TOOLS

Floor jack, rated jack stands, and wheel chocks Lug wrench and calibrated torque wrench Brake piston compressor or suitable spreader Socket set, wire brush, brake cleaner, gloves, and eye protection

PARTS

Front or rear brake pad set for 2020-2024 Kia Telluride; verify axle, brake package, and VIN fitment $180.00
Replacement pad hardware or wear sensor only if the kit requires it $25.00

STEPS

1. **Confirm axle, parts, and brake condition - Buy front pads for your exact trim plus new** abutment clips, brake cleaner, and silicone brake grease. Check the master-cylinder reservoir: if fluid is near the MAX line, siphon a little out now so retracting the pistons later doesn’t push...
2. **Lift and secure the vehicle - Level ground, rear wheels chocked, parking brake set. Break** the front lugs loose on the ground; jack at the factory points onto rated stands - never work under a jack alone - and remove the wheel.
3. **Hang the caliper safely once it is free - Hang the caliper from the strut or spring with** a wire hook the moment it’s free - never let it hang by the brake hose, and don’t touch the brake pedal while the caliper is off.
4. **Install pads and hardware - Clean the bracket lands and fit fresh abutment clips so the** pads glide. Compress both 46 mm pistons evenly through the old pad - going one at a time cocks them. Set the caliper over the pads.
5. **Refit the wheel and check the fluid - Refit the wheel and lower the vehicle, then tighten** the lug nuts fully in a star pattern with the tire on the ground. Check the reservoir level and top up with the correct DOT fluid if needed.
