2022-2024 Nissan Ariya Engage - Replace Cabin Air

2022-2024 Nissan Ariya | Easy | 10-15 minutes | $25 DIY

TOOLS
Small flathead screwdriver (optional, for cover tabs) Flashlight Damp cloth

PARTS
Cabin Air Filter $25.00

STEPS

1. **Work on the passenger side with the car off - The Ariya’s in-cabin microfilter sits** behind the glove box on the passenger side. Power the car fully off first - there’s no engine, but you don’t want the climate system kicking on mid-swap. Open the passenger door and get comfortable.
2. **Empty the glove box - Open the glove box and empty it completely. The box must swing all** the way down; anything left inside will jam against the dash trim or fall into the footwell.
3. **Unhook the damper arm if fitted - Look at the right side of the glove box for a small** damper arm on a pivot. If fitted, slide it off and let it hang. Forgetting it on reassembly is the classic rookie mistake.
4. **Release the stops and swing the box down - Press both sides of the glove box inward to** release the stop tabs, then swing it down on its lower hinges. Don’t force it past the hinges - it only needs to hang low enough to expose the filter housing.
5. **Open the filter tray cover - Behind the opening is the filter housing with a clip-on** cover. Squeeze its side tabs and pull the cover toward you, then slide the old filter out and note the airflow arrow’s orientation.
6. **Install the new filter and close the tray - Slide the new filter into the tray with its** airflow arrow matching the old filter’s orientation. Push the tray and cover back until the tabs click - a tray that isn’t fully seated lets unfiltered air into the blower.
7. **Reassemble and run the climate system - Lift the glove box, press the sides in so the** stops catch, and re-hook the damper arm. Close the box, power the car on, and run heat and A/C through several fan speeds.
