2018-2024 Nissan Kicks - Cabin Air Filter

2018-2024 Nissan Kicks | Easy | 10-15 minutes | $28 DIY

TOOLS

plastic trim panel tool shop vacuum or damp cloth flashlight gloves or dust mask

PARTS

Cabin air filter for 2018-2024 Nissan Kicks; verify arrows, size, and VIN/trim fitment $28.00

STEPS

1. **Confirm fitment and find the filter - This subcompact crossover, built on the same** platform as the Versa, keeps the job simple: you do not remove the whole glove box. You will need a plastic trim tool, a new filter for your year, and a few minutes.
2. **Set up the car and clear the footwell - Switch the ignition off and take the key out so** nobody runs the blower while the housing is open. Remove the passenger floor mat and anything sitting in the footwell - you will be kneeling or sitting sideways to reach under the dash.
3. **Pry off the inner panel under the glove box - Look at the plastic inner panel directly** beneath the glove box. Work a plastic trim tool into its edge and pry gently to release the clips holding it in place, starting at the inner edge and working outward. It may need a firm tug on the f...
4. **Open the filter lid and remove the old filter - You will now see the rectangular filter** housing lid. Press the release tab at the bottom of the lid to unlock it, then swing the lid open and pull the old filter out. Wear gloves or a dust mask if the filter looks packed - a long-overdue...
5. **Clean the housing and prep the new filter - Reach into the empty housing with a damp** cloth or a vacuum nozzle and clear out dust and leaf bits, keeping debris from falling into the blower opening. Hold the new filter next to the old one and check its printed arrows: they indicate th...
6. **Install the filter - Start the top edge of the new filter into the housing first, then** push the bottom edge in, working the rest of the filter in evenly until it sits flat.
7. **Test the airflow - Start the car and run the HVAC fan from low to high on fresh-air mode,** feeling the passenger vents for steady airflow and listening for any whistling from behind the dash that would mean the lid is not clicked shut.
