2013-2015 Nissan Sentra - Engine Air Filter

2013-2015 Nissan Sentra | Easy | 10-20 minutes | $20 DIY

TOOLS
Screwdriver or socket (if housing uses screws) Rag or shop vacuum Gloves

PARTS
Engine air filter $20.00

STEPS

1. **Prep and locate the air box - Park level, parking brake set, engine off. Pop the hood -** the airbox is the black plastic housing with ribbed intake tubing running to the 1.8L MRA8DE. No tools needed; Nissan calls for a replacement roughly every 30,000 miles or three y...
2. **Free the intake tubing from the airbox cover - Free the intake tubing from the airbox** cover: squeeze the three plastic clips - one large on top, two smaller on the sides - and pull the tubing up and out, sliding it off the lower intake pipe.
3. **Remove the old filter and clean - Unclip the two metal clips. Lift out the old filter,** noting orientation; drop-ins include Nissan 16546-30P00, Fram CA6900, and WIX 46044. Nissan calls for replacement roughly every 30,000 miles or three years.
4. **Install the new filter - Wipe the airbox and cover clean, keeping debris out of the open** intake. Set the new filter into the cover itself - the Sentra's filter seats there, not in the box - in the same orientation as the old one, seal fully captured, element f...
5. **Reseal and verify - Lower the cover onto the airbox, bottom tabs first, and re-clip both** clips. Reinstall the intake tubing, snapping all three clips in place and seating the tube over the lower pipe and dowel. Start the engine and listen at idle for a hiss o...
