2007-2011 Toyota Camry - Wiper Blade Replacement

2007-2011 Toyota Camry | Easy | 15 minutes | $66 DIY

TOOLS
None

PARTS
Driver wiper blade, 24" Bosch 24A $32.99
Passenger wiper blade, 20" Bosch 20B $32.99

STEPS

1. **Service position (if needed) - The 2007-2011 Toyota Camry (XV40) needs no special service** position - the arms lift straight off the glass by hand where they park.
2. **Lift the wiper arm - Raise one Camry wiper arm until it stays up and lay a folded towel** on the windshield beneath it. Never let a bare spring-loaded arm snap onto the glass - the spring tension is enough to chip it.
3. **Release the old blade - The Camry uses J-hook arms: press the release tab where the blade** meets the hook and slide the blade down out of the hook. Pull in line with the arm rather than twisting sideways, which can bend the arm.
4. **Match the new blade - The 2007-2011 Camry takes a 24-inch driver-side blade and a 20-inch** passenger-side blade on J-hook arms - the same sizes across all these model years and trims.
5. **Install until it clicks - Thread the new blade's connector into the J-hook until it** clicks, then tug gently to confirm it is locked. The 24-inch blade goes on the driver side, the 20-inch on the passenger side.
6. **Lower and repeat - Lower the arm gently onto the windshield and repeat on the other side.** Top off the washer fluid, mist the glass, and run a full wipe cycle. The sweep should be smooth and streak-free.
